COREY

Corey gained about 1/2 pound and is at 33.6 pounds today. He is fine at this weight but try not to have him gain much more. His ears and eyes are fine; no sign of infection. Teeth are good. Continue with the home dental care. Heart and lungs are clear. Abdomen palpated normal.

He is not limping today. No pain or sensitivity noted with either front legs. He has a crack in the callus on the large central pads of his front paws. But they do not seem to be causing discomfort. Monitor his lameness; get a video clip if possible of him going (walking) away from you and towards you. Further diagnostics and treatment based on lameness evaluation.

We updated his distemper-parvo and bordetella vaccines. The distemper-parvo was given on his left shoulder and the bordetella was given intranasally (nose drops). Let us know if any soreness or lump noticed around his shoulders.

Follow-up based on lameness report..tnt

HARLEY

Harley has not lost much and is maintaining his weight at 12.3 pounds. He is ok at this weight but we will continue to watch his diet to try and gradually get him back to about 11.5 to 12 pounds..tnt
