Gracie's glucose is still higher than we like and still present in her urine. We submitted the urine to check for her infection. Persistent urinary tract infection can make it difficult to manage her diabetes. We should have the results of the urine test tomorrow evening.

For now, increase her insulin to 24 units twice daily. Make sure she continues to eat well. Monitor her water intake. As long as she is doing well, bring a urine sample in a week for us to check. The plan for a curve in 2 weeks (bring her in for glucose, take her home for insulin and breakfast then bring back)..tnt
