Loki did very well today; he weighs 33 pounds and is in great body condition. His ears and eyes are fine; no sign of infection. Still has his puppy canines. Heart and lungs are great. Abdomen palpated normal. No pain around his tail.

We gave the last of series distemper-parvo vaccine. He still needs his rabies vaccine and neuter. Let us know when we can schedule those procedures. Usually, we give the rabies vaccine at time of suture removal IF the neuter is done soon (in a 2-4 weeks). If neuter is done later then we can see him in 2 weeks for the rabies vaccine only..tnt
