Oliver did very well for his first visit with us. He is social, friendly, and very well-adjusted. He is in good body condition at 13.6 pounds. His ears and eyes are clear; no signs of infection. However, he does have some hair in his ears and around his eyes that will need to be trimmed / removed by the groomer. Mild dental tartar. Work on handling his mouth and eventually brushing his teeth as discussed. To maximize the effectiveness of home dental care, he should be brushed 2-3 times a week.

Heart and lungs are clear.

Abdomen palpated normal. Joints are fine today. His nails are long but fine until the groomer can trim them at the next visit.

No fleas found on exam.

Skin is slightly dry with some flakes on his back. We will start him on a skin supplement that will also help with his allergies.

Rx: 3V Caps -- Give 1 capsule by mouth once daily as directed for skin. Refill when low.

Continue with the monthly Sentinel for now.

We will contact his previous veterinarian to confirm that it was Comfortis he was also getting monthly.

We will review his medical history before doing any other treatment i.e. vaccines or tests.

We should have records later this week.

Please call or email us if we have not contacted you by Friday.

Follow-up based on review of his medical records...tnt
