Client Notes for Taylor Hughes for 06/20/09:

Taylor's Weight: 14.81 Lbs

Reprint Client Notes online up to 30 days past your visit at www.thefamilyvet.net.

Your (case-sensitive) password is: Hughes

Taylor was great for his exam. He hid his face most of the visit but was very cooperative for the exam and blood draw. He lost a couple of ounces in the past year and is at 14.81 pounds today. Since we are trying to fatten up Winkie and it's difficult to manage their diets separately, we will continue to monitor his and Sophia's weight for now. Taylor's body condition is still acceptable at this weight.

His ears and eyes are fine; no sign of infection. He has moderate dental tartar, especially on his upper premolars. We submitted his blood for the wellness senior screen in preparation for the general anesthesia and scheduled his dentistry for Friday 7/31/09.

His heart and lungs are clear. Abdomen palpated normal; no pain and no mass noted.

No tapeworms noted on exam. Restart the Frontline Plus and let us know if any tapeworms noted again.

We updated his FeLV vaccine in his left rear leg, using the small / tiny needle. Let us know if any swelling or problems.

Unless problems or otherwise indicated by his lab results, we will see him on Friday July 31, 2009 for his dentistry. Take away his food after 8 pm Thursday 7/30/09; bring him in Friday morning between 7 and 8 am. Please call or email us if you have any questions or concerns..tnt

ADDENDUM 6/22/09

We received Taylor's lab results. The blood test results are great; no indication of any liver or kidney problems. His viral panel was also negative for FeLV and FIV. Unless problems, he is all set for the dentistry next month...tnt
